

Tanvi Ramoliya

Ahmedabad, Gujarat, India | +91-7016144514 | ramoliyatanvi@gmail.com | [linkedin.com/in/tanvi-ramoliya](https://www.linkedin.com/in/tanvi-ramoliya)

Senior Full Stack Developer & Team Lead with **6.5+ years** of professional experience specializing in the MERN stack, TypeScript, Next.js, and NestJS. Proven track record of architecting scalable enterprise web applications, leading high-performing cross-functional teams, and transforming complex business requirements into high-performance digital products. Expert in driving frontend optimizations, designing clean microservices architectures, and establishing robust engineering workflows that drastically accelerate time-to-market.

TECHNICAL SKILLS

Languages	TypeScript, JavaScript (ES6+), HTML5, CSS3, SQL
Frontend Ecosystem	ReactJS, Next.js, Redux Toolkit, RxJS, Tailwind CSS, Material UI, Ant Design, React Hook Form, Bootstrap, Custom Design Systems
Backend & Architecture	Node.js, NestJS, Express.js, RESTful API Design, Microservices Architecture
Databases	MongoDB, PostgreSQL, MySQL, Firebase
Cloud & DevOps	Amazon Web Services (AWS), Microsoft Azure, CI/CD Pipelines
Tools & AI-Native Development	Cursor, VS Code, GitHub Copilot, Claude, Git, Bitbucket, GitLab, Google Antigravity
Operating systems	Ubuntu Linux, Windows
Project Management	JIRA, Trello, Asana, Basecamp

PROFESSIONAL EXPERIENCE

JEAVIO INDIA PVT.LTD, VADODARA, GUJARAT (Remote)

June/2024 - April/2026

Senior Software Engineer

- **Engineered a core custom Design System** using ReactJS, TypeScript, and Tailwind CSS, reducing frontend development time across enterprise products by **35%** through modular, highly reusable UI components.
- **Designed a drag-and-drop Site Builder tool** driven by dynamic JSON schemas, empowering non-technical business clients to instantly deploy customized, client-facing websites.
- **Optimized application runtime performance** by replacing legacy form systems with schema-driven forms using *React Hook Form* and *Yup*, cutting form rendering delays and memory footprints by **40%**.
- **Developed an end-to-end Admin Analytics Portal** leveraging Node.js and MongoDB to process real-time user engagement metrics, implementing automated high-volume CSV exports and cron-scheduled email reports.
- **Maintained a 90%+ code coverage threshold** by writing comprehensive unit and integration test suites using *Jest* and *React Testing Library*, cutting production regression bugs by half.

THE ONE TECHNOLOGIES, AHMEDABAD, GUJARAT

Feb/2023 - April/2024

Team Lead

- **Directed a team of developers** in executing end-to-end product lifecycles; established sprint metrics using Agile/Scrum methodologies that boosted on-time sprint delivery rates by **25%**.

- **Spearheaded frontend transformations** by translating complex Figma prototypes into production-ready UI frameworks, enforcing strict component-driven development principles.
- **Designed scalable Node.js backend services and flexible data models**, structuring secure, highly performant APIs that optimized cross-component communication and reduced server response latencies.
- **Established a structured technical mentorship program** for incoming junior engineers and freshers covering advanced React, Node.js, and clean code principles, slashing onboarding ramp-up times by **40%**.
- **Served as a Technical Interviewer** on the core recruitment panel, defining evaluation standards to assess and source top-tier Senior and Junior Full Stack talent.

PEERBITS, AHMEDABAD, GUJARAT

Dec/2021 – Feb/2023

Software Engineer

- **Led the full-stack engineering** of customized client web platforms using React.js, translating functional workflows into highly scalable technical solutions.
- **Mentored 4+ junior developers**, providing regular pair-programming sessions and rigorous code reviews to maintain architecture alignment and code maintainability.

ZIGNUTS TECHNOLAB PVT.LTD, GANDHINAGAR, GUJARAT (Remote)

Oct/2020 – Nov/2021

Junior Web Developer & Trainee MERN Stack Developer

- **Accelerated migration to Next.js** for live client projects (*Edumeet, eFamo, Dentware*), leveraging Server-Side Rendering (SSR) to improve SEO positioning and initial page-load performance.
- **Built robust REST API endpoints** using Node.js, Express.js, and Sails.js while modeling flexible, high-efficiency data structures across MongoDB and MySQL database systems.

ZERONSEC INDIA PVT.LTD, JUNAGADH, GUJARAT

Sep/2019 – Sep/2020

Trainee Frontend Developer & Trainee Software Developer

- **Developed interactive user interfaces** leveraging Advanced JavaScript, Bootstrap, and React-Redux Saga workflows to handle complex asynchronous states.
- **Gained foundational insights** into core software development life cycle (SDLC) processes to hit sprint objectives predictably.

PROJECTS

Distinct- Enterprise CX Platform

Full Stack Developer | Team Size: 20–25 | Technologies: ReactJS, TypeScript, Tailwind, Node.js, MongoDB, React Hook Form, PagerDuty, SendGrid

- **Built a scalable, custom Design System** from scratch using reusable, accessible components with ReactJS and TypeScript, reducing overall frontend development timelines across all modules by **35%**.
- **Built an advanced Site Builder tool** driven by dynamic schema configurations, enabling runtime generation of customizable event websites and allowing non-technical business clients to deploy production-ready landing pages instantly.
- **Re-architected form rendering and validation architectures** using *React Hook Form* and *Yup*, cutting rendering memory footprints by **40%** while enabling infinite field-level customization for user registration and feedback collection modules.
- **Developed an end-to-end Admin Portal** empowering business users to analyze comprehensive campaign metrics including event attendance, real-time user registrations, and engagement KPIs via optimized analytics dashboards.
- **Engineered secure backend workflows** by structuring robust Node.js RESTful APIs coupled with optimized MongoDB data schemas to guarantee performant handshakes for brands, campaigns, and user metrics.
- **Automated data reporting systems** by building background cron jobs that handle high-volume CSV data exports and schedule automated report delivery via email directly to end-user systems.

- **Maintained tight software reliability** by enforcing a strict testing strategy, executing comprehensive unit and integration test suites using *Jest* and *React Testing Library* to prevent deployment regressions.
- **Key Features Built:** Role-Based Access Control (RBAC), multi-tenant secure Authentication, automated PagerDuty on-call alert escalations, dynamic SendGrid HTML email templates, SMS notification blocks, and real-time canvas data visualization grids.

Post Graduation - Scholarship Portal

Frontend Developer | Team Size: 8–12 | Technologies: Next.js, TypeScript, Tailwind CSS, Zod, RESTful APIs

- Accelerated frontend feature delivery by converting intricate UI specifications into modular Next.js components, ensuring pixel-perfect responsive layouts via Tailwind CSS.
- Eliminated invalid client-side form submissions by implementing rigid schema validations with the **Zod** library, enhancing data collection accuracy for academic records.
- Optimized data fetching and loading states through custom React hooks, delivering highly performant API integrations for real-time scholarship status tracking.
- **Key Features Built:** Reusable functional hooks, programmatic data display loaders, conditional eligibility application pipelines, and internal code-review frameworks.

Lenarge - Transportation Management System

Full Stack Developer | Team Size: 3–4 | Technologies: ReactJS, TypeScript, Node.js, MongoDB, Firebase

- Engineered high-throughput backend APIs to manage complex logistics demands, optimizing real-time data flow between transport dispatchers and the central database.
- Enhanced user retention and perceived application speed by introducing modern skeleton loaders and robust API fallback strategies to mitigate network latencies.
- **Key Features Built:** Component-driven data tables, dual asynchronous message brokers, fleet tracking endpoints, and cross-platform connection fallbacks.

Backtoit - Link Collection & Organization App

Full Stack Developer | Team Size: 4 | Technologies: Next.js, React, Node.js, NestJS, MongoDB, Mongoose, RESTful API, AWS S3 Bucket

- Led the full-stack architecture by decoupling a Next.js frontend from a fast, modular **NestJS** backend framework to achieve independent microservices scaling.
- Secured cloud media management by configuring **AWS S3 buckets** for encrypted asset storage, controlled tightly through custom Role-Based Access Control (RBAC) middleware.
- **Key Features Built:** Server-side layout processing, secure login auth flows, folder directory structures, and a robust admin user-management control panel.

Aramis - Security Risk Management

Frontend Developer | Team Size: 4 | Technologies: ReactJS, TypeScript, Tailwind CSS, Ant Design Charts, RxJS, React Query

- Delivered complex, interactive data visualizations and real-time security threat mapping dashboards by implementing optimized **Ant Design Charts**.
- Reduced redundant server polling overhead by **60%** by handling intensive, asynchronous log-streaming pipelines via **RxJS Observables** paired with **React Query** caching.
- **Key Features Built:** Live geography-based map plotting, streaming error handlers, type-safe data interfaces, and localized system logs.

Hubilo - Virtual Event Organiser

Full Stack Developer | Team Size: 10 | Technologies: ReactJS, Node.js, TypeScript, Redux Toolkit

- Optimized a high-volume virtual event application by implementing advanced React memoization patterns and custom hooks, eliminating unnecessary DOM re-renders.
- Stabilized global state across complex multi-user event feeds by structuring a centralized **Redux Toolkit** store to prevent race conditions during peak concurrent usage.
- **Key Features Built:** Micro-frontend API integrations, performance-masking layout skeleton loaders, graceful server fallbacks, and real-time concurrent user synchronization.

Kencor Health - Health Ecosystem

Frontend Developer | Team Size: 4 | Technologies: ReactJS, TypeScript, Strophe.js, React-Bootstrap, Redux

- Implemented a seamless, real-time instant messaging network within a healthcare ecosystem by integrating **Strophe.js for XMPP-based communication**.
- Guaranteed application stability and strict health-data presentation workflows by writing comprehensive, isolated test suites using **Jest**.
- **Key Features Built:** Functional React hook state managers, highly accessible Bootstrap interfaces, global healthcare chat routers, and cross-device testing profiles.

efamo - Geosocial networking & Dating APP

Full Stack Developer | Team Size: 4 | Technologies: HTML, CSS, ReactJS, Node.js, React Router, Axios, Redux, Material UI

- Built a highly secure onboarding experience supporting multi-channel authentication via Phone numbers, Email, and Facebook OAuth integrations.
- Designed an advanced multi-role Admin Panel with strict permission controls, allowing administrators to seamlessly manage user profiles, pagination, and system credit points.
- **Key Features Built:** Location-based match/swipe engine, user interest tag matrixes, custom sidebar layout architectures, and comprehensive Axios communication wrappers.

Dentware - Dental Clinic Management

Full Stack Developer | Team Size: 4 | Technologies: HTML, CSS, ReactJS, Node.js, React Router, Axios, Redux, Reactstrap

- Developed an interactive scheduling calendar mapping doctor availability against incoming appointments, completely eliminating double-booking errors.
- Engineered a graphical diagnostic comparative module enabling clinicians to view side-by-side historical patient metrics and X-ray images concurrently.
- **Key Features Built:** Dynamic charting dashboards, clinician filtering query bars, dental patient profile managers, and role-based module restriction toggles.

New2 - Information, Service & Networking Platform

Frontend Developer | Team Size: 4 | Technologies: HTML, CSS, Next.js, Axios, Redux, Localization APIs

- Expanded audience reach by building internationalization and multi-language content delivery layers into a high-traffic networking platform.
- Boosted platform monetization paths by writing the business logic for targeted ad placement grids and tiered user subscription models.
- **Key Features Built:** Content bookmarking engines, media stream players (audio/video), complex search/filter algorithms, and global layout state tracking.

EDUMEET - Education Meet

Backend Developer | Team Size: 4 | Technologies: Node.js, Express.js, Sails.js, AWS S3, OpenVidu

- Integrated **OpenVidu Library APIs** to deliver low-latency real-time video conferencing capabilities across virtual meeting classrooms.
- Structured performant Express.js and Sails.js multi-framework backend routers to manage media handshakes and authenticated AWS S3 asset uploads safely.
- **Key Features Built:** Media server handshaking handlers, clean RESTful data pipelines, secure file stream interceptors, and server-side connection monitors.

ACADEMICS

Qualifications:	B. E. Computer (GUJARAT TECHNICAL UNIVERSITY)	2021	93.70 %
	HSC (GUJARAT SECONDARY AND HIGHER SECONDARY EDUCATION BOARD)	2017	89.90 %
